

Environmental Remediation

Draper Aden boasts an award-winning environmental consulting, engineering, and remediation team that partners with clients on collaborative solutions to both routine and highly complex environmental challenges. Our environmental remediation team is recognized as an international leader and innovator in the science of in situ remediation of contaminated soil and groundwater— critical expertise that has saved clients millions of dollars annually.

We provide a number of service offerings that enhance our existing environmental capabilities. These enhanced services include soil and groundwater remediation, environmental technology development, site investigations, feasibility studies, long-term site monitoring, compliance and regulatory support, sustainability evaluations and audits, remedial design, implementation and optimization, and stormwater services. Additionally, we developed the top bioremediation technology used around the country.
